To: MyDx Store info@cdxlife.com

Hi, I did some comparative testing with the MyDx unit that you just sent me, and a High Pressure Thin Layer Chromatography class I took, and used the test kits to do the comparative testing with. Well here's the results that I posted on Facebook.

Just tested the White Widow strain with the MyDx unit, and the HPTLC method that we both took a course and got certified to analyze with. As you can see, the White Widow strain came in at 26.75% THC, and the HPTLC method came in at 27% THC. I will be showing the results of a whole bunch of different strains that are ready today. Hang onto your hats.

LA Confidential HPTLC test came in at 20% THC.
